PROFESSIONAL SUMMARY

MERN Stack Engineer with **4+ years of experience** architecting high-performance SaaS applications, specializing in advanced document automation, content processing, and secure cloud storage. Proven track record of eliminating expensive third-party enterprise dependencies (**Froala, Filestack, Docxtemplater**) by engineering robust, proprietary in-house engines. Adept at leading cross-functional engineering teams to bridge complex web and desktop workflows, with deep technical proficiency across the full stack (**MongoDB, Express.js, React.js, Node.js**) and cloud infrastructure (**AWS S3**).

EXPERIENCE

DealDox, Software Developer

01/2023 – Present | Bengaluru, India

- **Engineered Custom WYSIWYG Editor:** Built a complex, high-performance rich text editor using **React, Tiptap, and ProseMirror**, handling advanced DOM manipulations and isolated multi-editor states to **deprecate a paid Froala subscription**.
- **Developed Enterprise PDF Conversion Engine:** Independently designed and implemented a custom **LibreOffice** module for industry-grade Word-to-PDF conversion with dynamic TOC support, **replacing the paid Filestack API**.
- **Architected Document Templating Microservice:** Led an engineering team to build a robust **Python-based** document generation pipeline managing complex data injections, **successfully replacing Docxtemplater**.
- **Built Cloud Storage & Desktop Integrations:** Migrated enterprise file management to **AWS S3** and led a cross-functional team to build a secure **C# SolidWorks connector**, bridging web and desktop workflows and eliminating heavy third-party dependencies.

Bristlecone India Limited, Frontend Developer

03/2022 – 10/2022 | Bengaluru, India

- **Engineered Full-Stack CRUD Workflows:** Developed and optimized RESTful APIs using **Node.js, Express.js, and MongoDB**, implementing robust backend validation, error handling, and secure authentication middleware.
- **Optimized React Frontend Performance:** Refactored component architectures, implemented efficient state management patterns, and enhanced responsive UI designs using **React.js, Tailwind CSS, and Modern JavaScript (ES6+)**.
- **Integrated Third-Party APIs & Services:** Configured and managed asynchronous third-party service integrations, streamlining data pipelines, webhook event processing, and external data synchronization.
- **Collaborated in Agile Development Cycles:** Participated in sprint planning, code reviews, and Git-based version control workflows, translating product requirements into clean, scalable, and maintainable code.

EDUCATION

P.E.S. Institute of Technology and Management, Bachelor of Engineering

Affiliated with Visvesvaraya Technological University

TECHNICAL SKILLS

- **Programming Languages:** JavaScript, Node.js, HTML, CSS, C#
- **Frameworks & Libraries:** React.js, Express.js, Tiptap, ProseMirror, Tailwind CSS
- **Cloud & Storage:** AWS S3 (Server-Side/Client-Side Encryption), AWS SDK
- **Document Processing & Tools:** LibreOffice (Headless Mode), Mammoth, Python, REST APIs, JSON, JWT, Git, GitHub, Postman, VS Code

LANGUAGES

English (Fully Professional Proficiency) | **Kannada** (Fully Professional Proficiency) | **Hindi** (medium)

KEY ACHIEVEMENTS

- **Engineered Cost-Saving Proprietary Modules:** Successfully eliminated multiple recurring third-party subscriptions (**Froala, Filestack, Docxtemplater**), significantly reducing annual operational overhead while improving system scalability.
- **Accelerated Feature Delivery:** Delivered a high-stakes, time-sensitive enterprise client requirement within an aggressive deadline, ensuring flawless execution and 100% customer satisfaction.
- **Optimized Document Processing Scale:** Scaled backend document generation workflows to handle heavy enterprise-grade loads smoothly, minimizing server response times and failure rates.
- **Engineered a C# desktop connector bridging the core MERN web application with SolidWorks,** leading a cross-functional engineering team to enable real-time synchronization of configurations, properties, BOMs, balloons, and mate states (suppress/unsuppress) for enterprise client Bajaj Indef. (Design Automation)
